

POWERSTROKE SUPER

Unique Metal Products introduces the new **SUPERFILTER** ... the ultimate air filter for your 1999-2002 Ford Powerstroke Diesel. A direct descendant of our legendary off-road race unit, this system more than doubles the filter area of your stock, leak prone air box.

Years of off road competition have resulted in this incomparable design.

The UMP **SUPERFILTER** incorporates a unique swirl flow design inside the aluminum air box to help separate the larger dirt particles out before they can even reach the filter. This results in a much longer filter life and increased performance over longer periods. And with our **SUPERFILTER**, your Super Duty will be protected from harmful dirt that other filters and your stock air box let through.

UMP's filters are developed for the heavy equipment industry. They are a dry paper element and feature a self cleaning action that increases performance for the life of the filter. Plus, forget what you have heard about oiled gauze style filters. With their porous design they flow a lot of air but can't match the superior filtering capabilities of paper.

UMP filters also are ducted to outside air. No heat and dust from inside the engine compartment, and cooler, cleaner air means better performance.

Unique Metal's SUPERFILTER is used on the Style Imagineering SuperTow Outlaw featured in TRUCKIN' Magazine

- **Unique Swirl Flow Design**
- **Double the Stock Filter Cleaning Area**
- **Specially Developed Heavy Equipment Filters by Donaldson**
- **Race Winning Design**
- **Rugged Aluminum Construction**
- **Protects Against Expensive Turbo and Engine Damage**
- **Twice the Life of Your Current Filter**
- **Bolts Easily Into Stock Location**
- **Dealer Inquiries Invited**
